WELCOME MESSAGE FROM GENERAL CHAIRS

The International Conference on Intelligent Computing (ICIC) was started to provide an annual forum dedicated to the emerging and challenging topics in artificial intelligence, machine learning, pattern recognition, bioinformatics, and computational biology. It aims to bring together researchers and practitioners from both academia and industry to share ideas, problems, and solutions related to the multifaceted aspects of intelligent computing.

ICIC 2020, held in Bari, Italy, October 2-5, 2020, constituted the 16th International Conference on Intelligent Computing. It built upon the success of ICIC2019-ICIC 2005 that were held in Nanchang, Wuhan, China, Liverpool, UK, Lanzhou, Fuzhou, Taiyuan, Nanning, Huangshan, Zhengzhou, Changsha, China, Ulsan, Korea, Shanghai, Qingdao, Kunming, and Hefei, China, respectively.

This year, the conference concentrated mainly on the theories and methodologies as well as the emerging applications of intelligent computing. Its aim was to unify the picture of contemporary intelligent computing techniques as an integral concept that highlights the trends in advanced computational intelligence and bridges theoretical research with applications. Therefore, the theme for this conference was “Advanced Intelligent Computing Technology and Applications”. Papers focused on this theme were solicited, addressing theories, methodologies, and applications in science and technology.

ICIC 2020 received 457 submissions from 21 countries and regions. All papers went through a rigorous peer-review procedure and each paper received at least three review reports. Based on the review reports, the Program Committee finally selected 162 high-quality papers for presentation at ICIC 2020, included in three volumes of proceedings published by Springer: two volumes of Lecture Notes in Computer Science (LNCS), and one volume of Lecture Notes in Artificial Intelligence (LNAI).

The organizers of ICIC 2020, including Tongji University, Polytechnic of Bari, Italy, made an enormous effort to ensure the success of the conference. We hereby would like to thank the members of the Program Committee and the referees for their collective effort in reviewing and soliciting the papers. We would like to thank Alfred Hofmann, executive editor from Springer, for his frank and helpful advice and guidance throughout and for his continuous support in publishing the proceedings. In particular, we would like to thank all the authors for contributing their papers. Without the high-quality submissions

from the authors, the success of the conference would not have been possible. Finally, we are especially grateful to the International Neural Network Society, and the National Science Foundation of China for their sponsorship.

IV. Information for Oral Presenters

- Please prepare a 12-minute PowerPoint (PPT) slide. Your actual presentation time may depend on the number of presentations in your session.
- Please check this Final Program for your presentation time and room. Please go to the room five minutes before the session starts and report to the Session Chair.
- Please follow the instructions of the Session Chair(s) not to exceed your time allotted to you by them.
- If the Session Chair(s) is/are absent from the session, the last speaker is requested to serve as the Session Chair.

V. Information for Session Chairs

The Organizing Committee would like to ask for your kind help as Session Chair(s). If you cannot fulfill your duties as session chair, please try to make sure that someone else will take your place as Session Chair(s).

As a Session Chair, you are kindly requested to help at the following:

- Arrive at the room of the session at least 5 minutes before the session starts and identify each of the speakers for the session.
- Calculate and announce the time allocated for each paper in your session for only the authors present before the session starts.
- The time allocated to a paper may be different in different sessions, due to uneven distribution of papers in different areas and a small number of absentees due to visa and other reasons. The suggested time for each presentation is 15 minutes, then request each presenter to talk for no more than 12 minutes, with 3 minutes for question and answers.
- Each oral presentation room is held online via VooV Meeting/Tencent Meeting, please keep the internet open.

Introduction of Keynote Speakers

■ Keynote Speaker 1: Oscar Cordón

Computational Intelligence for Skeleton-based Forensic Identification

Oscar Cordón, IEEE Fellow, PhD & Professor
Department of Computer Science and Artificial Intelligence, University of Granada, Spain
Email: ocordon@decsai.ugr.es
Personal website: http://decsai.ugr.es/~ocordon/

Abstract: Skeleton-based forensic identification (SFI) techniques are a sound alternative to other kinds of primary human identification methods when there is not enough ante-mortem (AM) or post-mortem (PM) information as the skeleton usually survives both natural and non-natural decomposition processes. Two of the most important SFI techniques are craniofacial superimposition (CFS) and comparative radiography (CR). CFS aims to overlay a skull with some AM images of a candidate in order to determine if they correspond to the same person. CR considers the AM and PM comparison of other bones and cavities (skull frontal sinuses, clavicles, patellae, …) which have been reported as useful for positive identification based on their individuality and uniqueness.
Designing systematic and automatic methods to support the forensic anthropologist when applying CFS and CR, avoiding the use of subjective, error-prone, and time-consuming manual procedures, is mandatory to enhance forensic identification. The use of computational intelligence (evolutionary algorithms, fuzzy sets and deep learning) and computer vision (3D-2D image registration and image processing) is a natural way to achieve this aim. This talk is devoted to present two intelligent systems for CFS and CR developed in collaboration with the University of Granada's Physical Anthropology Lab within a fifteen years long research project. One of those systems is protected by an international patent, exploited by Panacea Cooperative Research, and is under commercialization in Mexico.
